

Straightforward Network Solution

SCENARA® Collaboration Management

Straightforward audio and video communication with SCENARA® Collaboration Management

Discover a unique communications experience from the OR with **SCENARA® Collaboration Management**. Benefit from the possibility to transmit a live surgical image from the OR to one or more locations in the hospital in order to consult colleagues easily and quickly, to make arrangements or to share the entire operation with an auditorium for training purposes.

Cooperation

SCENARA® .room2room facilitates coordination between two defined rooms via bidirectional audio and video transmission. Transplantation procedures running in parallel, for example, can be followed by all participants and feedback from other departments, e.g. pathology, can be forwarded to the OR without delay.

- Bidirectional audio and video transmission
- Integration of all image sources in the operating room
- Simplified communication between two operating rooms
- Rapid cross-departmental information exchange

Knowledge exchange and training

SCENARA® .live allows convenient video and audio communication between the operating room and any location within the hospital, e.g., meeting rooms, offices or lecture halls and also offers a telestration function. Transmission is reliable regardless of distance so that nothing stands in the way of location-independent cooperation.

- Live transmission of events in the operating room
- Direct exchange with external communication partners, including a telestration function
- Transmission to any location within the hospital
- Straightforward consultation with colleagues during a procedure
